

## Science- Materials

This term our Inquiry Unit is Materials. In Room 2 we have identified what a scientist does and the behaviours they show to achieve success. The students came up with lots of ideas. Earlier this week we looked at many different materials and described them. We then looked at possible uses for the different materials based on their properties. Throughout this unit we will be learning about changes in state when heating and cooling, reversible and irreversible changes and atoms. We will be engaging in lots of experiments- just like scientists do!
