

Kaeo School at Home

Kia ora from Miss Campbell

Here are your activities for today. You can email me, stephanie.campbell@kaeo.school.nz when you have finished an activity, or if you like, post pictures of your work on our Kaeo School @ Home Facebook Page. Try and find some time to get out side and get some fresh air if you can today, and do the last activity with one of the adults in your bubble. Stay Safe, Miss Campbell.

I have again included a couple of texts on the following page for you to work on.

A non-fiction text with some follow-up questions to discuss with someone in your bubble, and a fiction text. The second text doesn't have any follow-up questions, your task is to make up your own follow-up questions and share these with someone in your bubble.

Again I have included below the link for the Celebrity Maths Questions in case you haven't had a look. I have picked out a couple more of my favourite celebrities questions for you today. Enjoy!

Former All Black John Kirwan

Beauden Barrett is in his 30's, his age is a multiple of 4, in one year's time his age will be a multiple of 3. How old is he now?

Tyla Nathan Wong from the Black Ferns 7's team

A maths test lasts for one and a half hours, if it starts at 9.37, what time does it finish?

Write a story about a character who lives in an ancient society. When a shiny, unnatural looking contraption touches down and *creatures* emerge, everything they once knew changes.

This story can be as scary or as happy as you like. If you have time illustrate your story and share it with your bubble. It might make a great bedtime story if you have little siblings.

Here is your spelling work for this week—how many different ways can you find that spell the long 'o' sound as you hear it in the word 'go'

Make a table with each new way to spell 'e' as the heading for each column and fill each column with as many words as you can using that spelling pattern.

Remember it is 'o' as in go not 'o' as in hot.

Here is another challenge that you can either do by yourself or with someone in your bubble. This one is designed to get you up and moving and hopefully having lots of fun. I love the way the parents in this video have joined their kids to do the 'Baby Shark' dance. Watch the link below and have a go. If you want you can post your version on our fb page.

'Baby Shark' - The Parent Jam

Wonderings about Weather

Weather is a marvel yet to be mastered by your local weather man. Sometimes the forecast is sunny and it rains, sometimes the forecast calls for snow and the sun shines.

There are many things that can affect the weather and there are even scientists devoted to studying long term weather patterns and their effects on the earth. For decades, people have recorded high and low temperatures each day. Those high and low records vary greatly in different parts of the world.

Weather is often influenced by other weather, making it difficult to pinpoint an exact weather forecast. Today, we watch the news to hear about the weather forecast. However, long ago people used many different methods to determine the weather. Some cultures even performed ceremonies in an effort to change the weather.

Whether it's hot or cold, rainy or dry, windy or muggy, it's all weather.

Show What You Know

1. What proof does the author provide to support the first sentence of the article?
2. Why are scientists devoted to studying long term weather patterns?
3. Rewrite the last sentence of the paragraph to sum up the main idea.
4. How have scientists tried to improve the art of predicting weather?

SUDDENLY SICK

Shawn put his elbow on his desk and dropped his head slowly, making his way to the cool surface of his table. When his cheek finally hit the desk, the burning sensation on his face eased a bit. He closed his eyes, still watery and feeling like they were on fire.

Even though his eyes were shut, the world around him began spinning. Shawn felt a tap on his shoulder, followed by his dear teacher asking, "Shawn? What's wrong? Are you okay?" He tried to lift his head off his desk, but he could barely open his eyes. "I...I...I think I'm coming down with something," he managed to mutter. Ms. Clarkson asked Tyler to come help Shawn to the nurse's office.

When the nurse took his temperature, it read 103.8 degrees! Shawn's mom immediately came to the school to pick him up and take him directly to the local urgent care center. As soon as the doctor saw Shawn, he knew right away that he had strep throat. Luckily, Shawn was able to get medicine and was feeling better in no time at all!
