

Room 4 – Newsletter

Week 10 – 2022

In Room 4, we have been learning how to operate our new Sphero. A Sphero is a tiny robot orb, which you control from an iPad using a joystick. We are learning the vocabulary for coding the Sphero, to help us learn how coding works and how it is used in everyday life.

These children set up an obstacle course for the Sphero, and soon discovered that they needed to make the spaces between the obstacles much further apart.

This experience has also given us great opportunity to practice taking turns, being patient and sharing with our peers.
